

ABSTRACT OF THE DISCLOSURE

A color display unit has a substrate, an organic electroluminescent device, a passivation film and a color filter. The organic electroluminescent device is located on the substrate. The organic electroluminescent device has an electroluminescent layer composed of organic electroluminescent material. The passivation film covers the electroluminescent device so that the electroluminescent layer is not exposed to the outside air. The color filter is located on the passivation film.
